DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Fujikawa (2002/0098431). Fujikawa teaches a toner where the binder has the same crosslinking between carboxyl groups of a vinyl resin and an epoxy group. Fujikawa specifically teaches using a copolymer of an aliphatic conjugated diene compound (paragraph 178). Properties such as THF-insoluble matter, acid value of the toner, and molecular weight distribution are specifically taught by Fujikawa (claims).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fujikawa (2002/0098431). Fujikawa is discussed above. It would have been obvious to one of ordinary skill in the art to use any aliphatic conjugated diene compound as a copolymer with the toner taught by Fujikawa (paragraph 178) because of the expectation of similar results due to the known performance of aliphatic conjugated

diene compound and the similarities of toner characteristic directly suggested by Fujikawa drawn to the instant claims.
